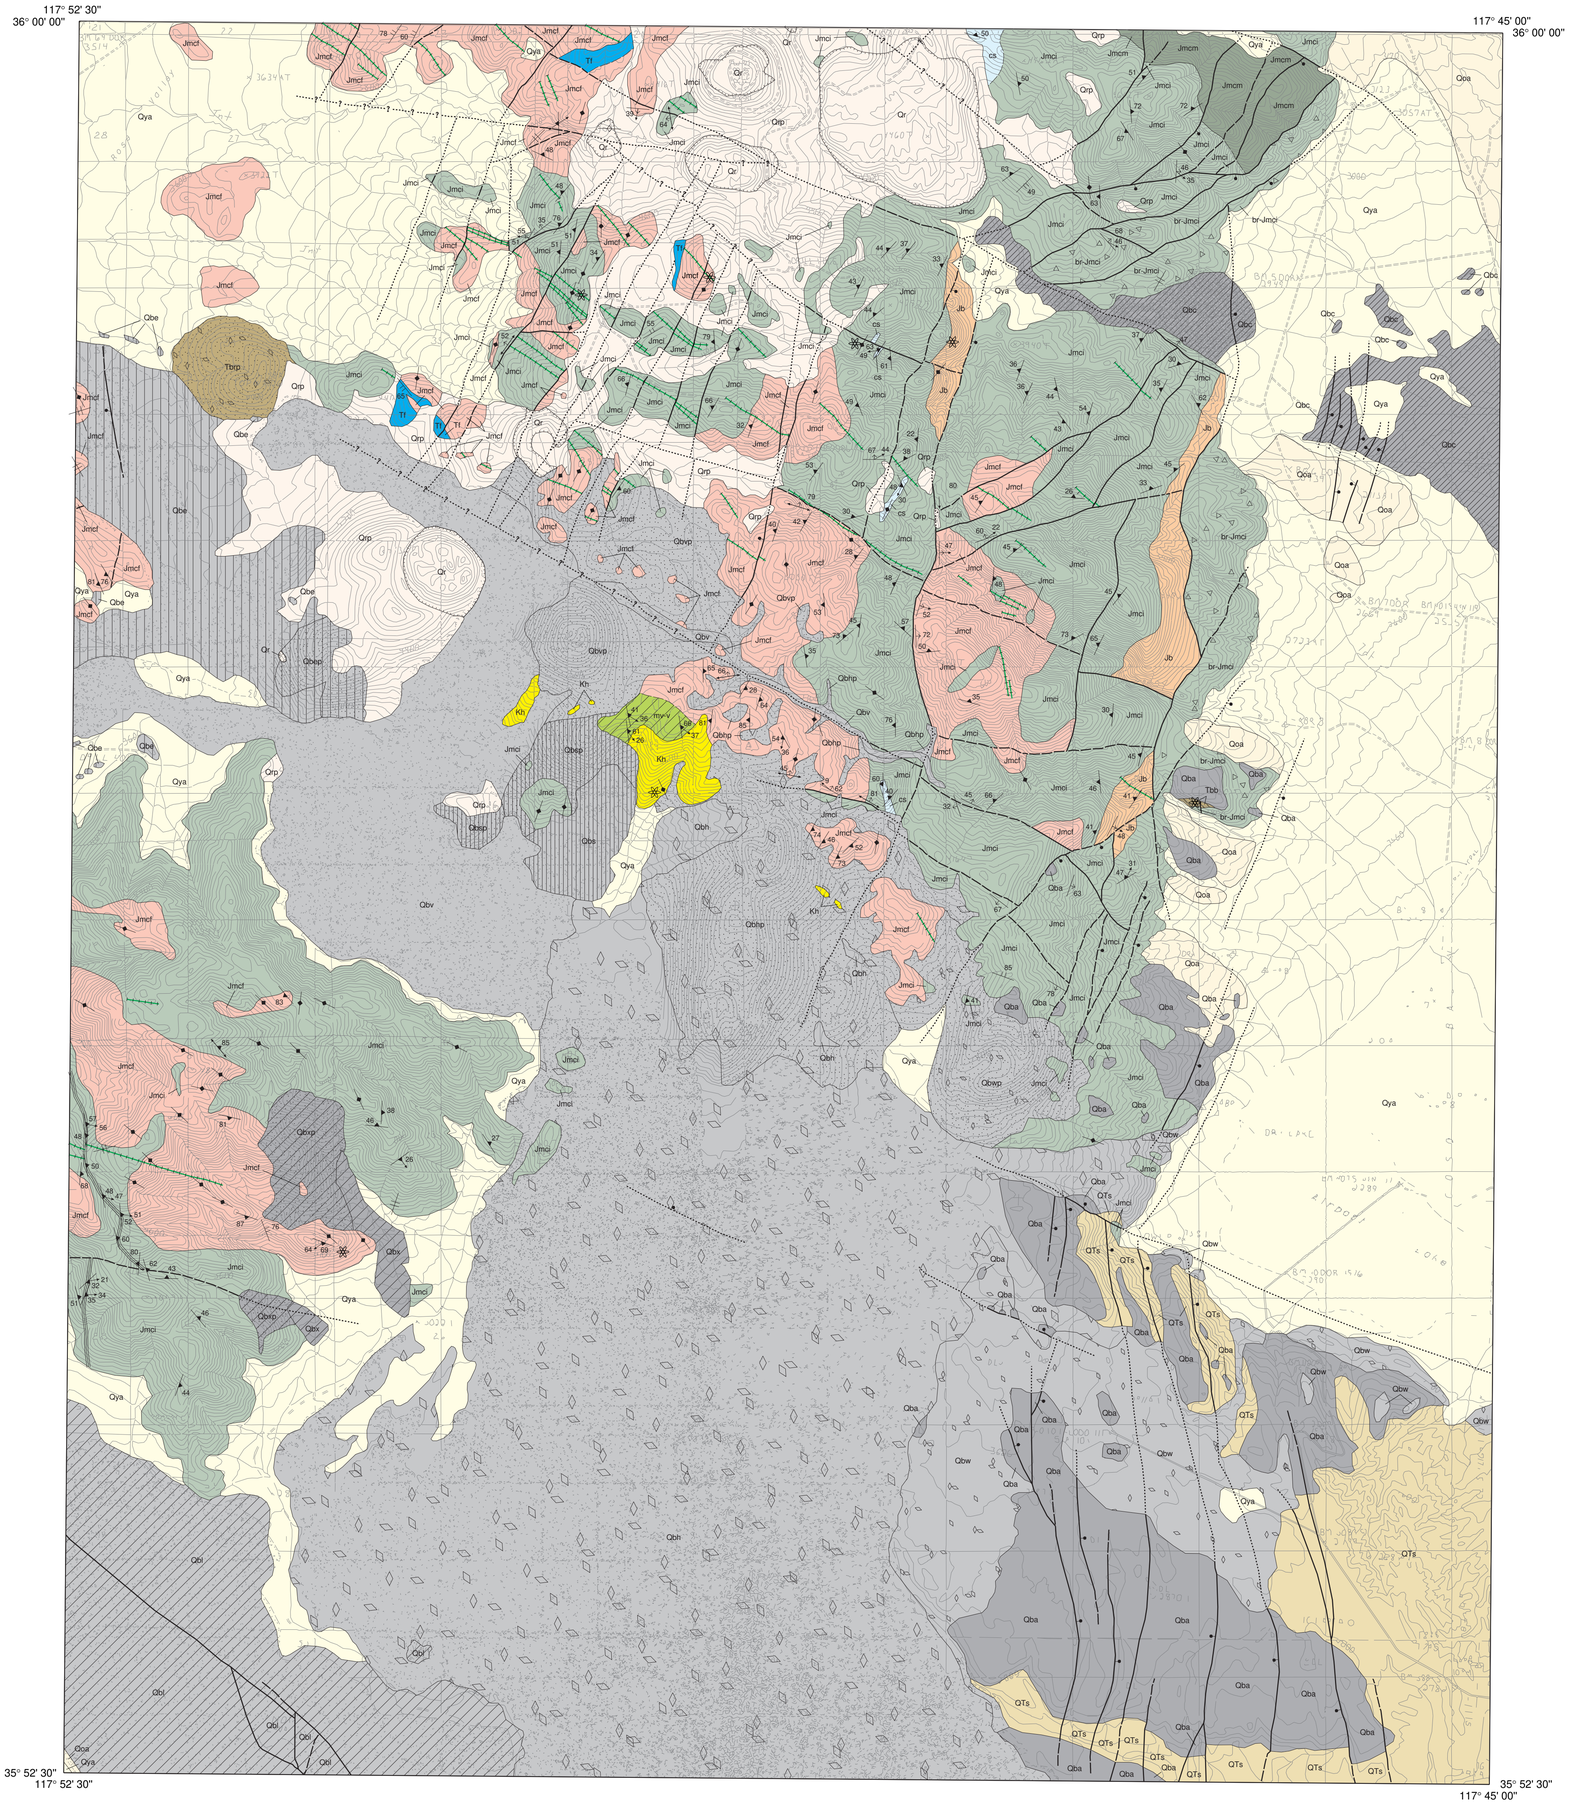
Volcano Peak Quadrangle



EXPLANATION†

COVER UNITS

Quaternary

- Qya — Younger Alluvium*
- Qbvp — Basalt of Volcano Peak, pyroclastic*
- Qbv — Basalt of Volcano Peak*
- Qbsp — Basalt South of Volcano Peak, pyroclastic*
- Qbs — Basalt South of Volcano Peak*
- Qbep — Basalt East of Little Lake, pyroclastic*
- Qbe — Basalt East of Little Lake*
- Qrp — Rhyolite West of Coso Hot Springs, pyroclastic*
- Qr — Rhyolite West of Coso Hot Springs*
- Qbhp — Basalt West of White Hills, pyroclastic*
- Qbh — Basalt West of White Hills*
- Qbwp — Basalt West of Airport Lake, pyroclastic*
- Qbw — Basalt West of Airport Lake*
- Qbl — Basalt Southeast of Little Lake*
- Qoa — Older Alluvium*
- Qbc — Basalt of Coso Wash*
- Qbtp — Basalt of Hill 3661, pyroclastic*
- Qbtx — Basalt of Hill 3661*
- Qba — Basalt of Airport Lake*

Tertiary

- QTs — Sedimentary Rocks of White Hills*
- Tbrp — Basalt of Rose Valley, pyroclastic*
- Tbb — Basalt of Coso Basin [3.58±0.86 Ma]

BASEMENT UNITS

Tertiary

- br-Kcf — Tectonic breccia derived from various basement units. Specific protolith indicated by unit label suffix (e.g., br-Kcf designates breccia derived from unit Kcf—Leucogranite of Cactus Flats)
- Tf — Felsite Intrusions

Cretaceous

- Kh — Hillside Pluton {Biotite+muscovite Alkali-feldspar Granite} [75±1 Ma]
- JKdi — JKdi—Independence Dike Swarm (red: felsic, green: mafic–intermediate) [166±1 to ~119 Ma]

Jurassic

- Jb — Blackspot Pluton {Quartz Monzodiorite} [150±1 Ma]
- Jmcm — Mixed Complex, mafic component {Hornblende Gabbro}
- Jmci — Mixed Complex, intermediate component {Quartz Monzodiorite} to {Diorite} [151±1 Ma]
- Jmcf — Mixed Complex, felsic component {Alkali-feldspar Granite} to {Quartz Monzonite} [164±1 Ma]

Pz–Mz

- mv-v — Metavolcanic Rocks of Volcano Peak; intermediate–mafic, porphyritic
- cs, etc. — Metamorphic Rocks of Uncertain Age (see Chapter One for details)

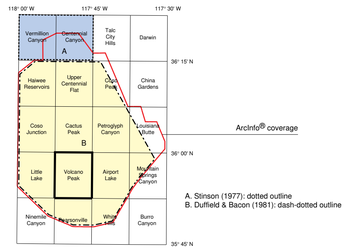
MAP SYMBOLS

- Boundary of Quaternary rhyolite within coeval pyroclastic deposits; tick marks face toward eruptive center
- Boundary of probable landslide; tick marks localized along base of slide block and face toward structural top
- Approximate structural limit of tectonic breccia; tick marks localized along brecciated side of contact
- Fault contact; solid (known), dashed (approximate), dotted (inferred), queried where conjectural. Ball and bar on down-dropped side of normal fault. Teeth on upper plate of thrust fault.
- Ductile shear (mylonite) zone
- Intrusive or depositional contact; solid (known), dashed (approximate), short dash with query (inferred)
- Fold axis; syncline, anticline, doubly-plunging syncline
- 63 — Strike and dip of bedding plane; inclined
- 49 — Strike and dip of flow foliation; inclined, vertical
- 58 44 74 13 32 — Strike and dip of fault plane; inclined, w/ down-dip lineation, w/ horizontal lineation, w/ oblique lineation, subhorizontal lineation
- 80 — Strike and dip of fracture cleavage; inclined, vertical
- 58 — Strike and dip of joint plane; inclined, vertical
- 81 48 21 35 17 — Strike and dip of foliation/compositional layering; inclined, vertical, w/ down-dip lineation, w/ horizontal lineation, w/ oblique lineation
- Locality of sample used for radiometric age determination.

† Units listed represent only the geologic column for this quadrangle. The geologic column for the entire Coso Range, including description of the radiometric ages cited here, is listed within the text file on this CD. Units highlighted with an asterisk (*) were defined and described by Duffield & Bacon (1981). Map symbols shown represent the complete set of symbols used in this study. Some of those illustrated may not be relevant to the geology of this particular quadrangle.

GEOLOGIC MAP OF THE VOLCANO PEAK 7.5' QUADRANGLE; INYO COUNTY, CALIFORNIA

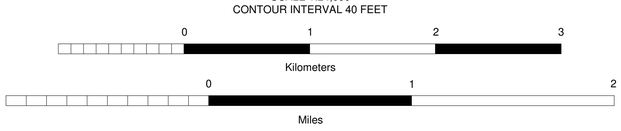
Compilation by Richard S. Whitmarsh
1997



A: Stinson (1977): dotted outline
B. Duffield & Bacon (1981): dash-dotted outline

Reference map with 7.5 minute quadrangle boundaries. Red line delineates boundary of ArcInfo® coverage compiled by Whitmarsh during 1994-1997 at the University of Kansas: Department of Geology: Structural geology and GIS laboratory. Shaded areas (A and B) encompass portions of earlier geological maps containing contacts that have been included in this compilation. Bold black line highlights the locality and boundary of this quadrangle.

SCALE 1:24,000
CONTOUR INTERVAL 40 FEET



Total map area of Whitmarsh (see reference map) includes some contacts and unit labels established by Stinson (1977) and Duffield & Bacon (1981). Contacts within the Cenozoic cover sequence either copied or adapted from Duffield & Bacon (1981). Structural data and contacts within the pre-Cenozoic basement complex, except within unit Mzb, established by Whitmarsh 1994-1996.
